

SOLAR FOR YOUR BUSINESS

Installing a solar project at your business is more affordable than ever. From tax credit resources to incentives and more, our Business Energy Efficiency Program is your source for all things solar.

Program requirements

- Incentives are capped at 50% of the project cost, up to \$500,000.
- All solar projects should be efficiently designed. All solar incentives will be calculated and paid based on energy usage displaced from the PPL Electric Utilities system and capped at the customer's 12-month annual usage. Customers without kWh load offset by solar are not eligible for incentives.
- To be eligible for incentives, projects are required to submit an interconnection application to PPL Electric Utilities and receive a certification to certificate (COC) before incentives can be paid. For assistance, reach out to PPLBusiness@clearResult.com.
- New construction projects will be vetted based on the PPL Electric Utilities service application. TRC and incentives will be calculated based on the customer's displaced energy.

Why go solar?

Reduce your annual electricity use.

Receive incentives of \$0.08/kWh.

Combine our incentives with federal or state tax credits to help cover the cost of your solar energy system – in as little as one year.

Increase your property value with lower operating costs and less environmental impact.

Boost your reputation by showing your business's commitment to sustainability and social responsibility.

Start your solar journey
